

## Fast, Easy Video Conversion

ACDSee Video Converter 5 easily converts video files between most popular media formats at high speed and quality.

# **Top Features**

### Multiple Videos & Multiple Formats

Add a group of videos to your list and choose a different output format for each. Press the Start button to begin batch converting all the videos on your list. You can even set the program to close after the batch conversion is done, or pause and restart at your convenience.

### Full Customizable Output Presets

Fine-tune your output options and store them as user-defined presets by choosing and customizing frame size, video bitrate, audio bitrate, and more. Your output preferences will be properly configured for your device, every time.

#### **Fill Your Screen**

The smart video aspect ratio clipping feature makes full use of your device's screen. When the input video aspect ratio does not match the output profile screen aspect ratio, ACDSee Video Converter will automatically trim the edges of the input video to ensure it takes advantage of your full screen.
